Carolyn

Per our discussion, please find attached the preliminary air analytical results table for the Former Amphenol Facility. As you are aware, we reported the VC and 1,2 DCA concentrations down to the laboratory method detection limits (as opposed to the reporting limits) for EPA Method TO-15 but they method detection limits still slightly exceeded the most stringent EPA Regional Screening Level. Consequently, we are having the lab analyze those 2 compounds via TO-15 SIM, which allows us to meet the EPA Regional Screening Levels. However, these results will not be available until Tuesday. Once the new results have been received, we will finalize the table for submittal to the EPA.

Please contact me with questions.

Sincerely,

Bradley E. Gentry, LPG
